Professional Experience

Iksula | Adobe Magento Backend Lead (April 2025 - Current)

*1. **Project Name:** Binsina (AKI group). **Role:** Adobe commerce Lead. **Team Size:** 12*

BinSina was the first pharmacy chain in the UAE. Over **five decades** and **150 stores** later, it remains deeply committed to building trusted, lasting relationships in our communities.

This project features a **multi-store** and **multi-website** setup built on **Adobe Commerce Cloud 2.4.7**. The Android app was developed using **Kotlin**, while the iOS app was built with **Swift**. The Adobe Commerce Server serves as the backend system, integrated with various tools: **LMS** for customer relationship management (**CRM**), **UCS** for enterprise resource planning (**ERP**), and **OMS** for handling simple products. Additionally, we use **SWAN** for **CRM**, promotions, push notifications, installation tracking, **deep linking**, and user behavior monitoring across all platforms. **Algolia** is implemented for **search services**, and **Fastly** is utilized for caching and content delivery network (**CDN**) services. We also employ Google Analytics (**GA**), Google Tag Manager (**GTM**), and Google Search Console (**GSC**) to capture user interactions, along with **New Relic** for application performance monitoring (**APM**).

Customers can create accounts via **social login** or one-time password (OTP). We have streamlined our checkout process, allowing for partial payments through the **Tabby** and **Tamara** payment gateways.

Our website optimization has led to a **40%** increase in traffic and a **60%** rise in sales. As a result, we began implementing new features, such as a subscription service customized using the **Amasty subscription** plugin, an **express delivery** option for next-day delivery, push and in-app notifications, deep linking, brand pages, newsletter subscriptions, and product review ratings. Throughout these enhancements, we have maintained the performance of our applications.

Additionally, we optimized our caching mechanisms by employing a custom **VCL** script on **Fastly**, localized the **Google location API** to reduce costs, and provided options for uploading **WebP** images. We also regularly cleared unnecessary tables and logs, resolved a 503 error related to downloading sales and product reports, and optimized logs to reduce disk space usage. Following these improvements, we have experienced an **80%** increase in traffic and **doubled** our sales, continuing to grow day by day.

2. Project Name: *Petit-Bateau (AKI group)*. Role: *Adobe commerce Lead*. Team Size: 8

Petit-Bateau offers one of the most stylish collections of kids' and baby wear available online in the Middle East. This is a multi-store, multi-website built on **Adobe Commerce Cloud version 2.4.6**.

The site features both simple and configurable products. It integrates with **SWAN** for **CRM**, **Live Search** for search functionalities, and **Fastly** for caching and content delivery network (**CDN**) services. Google Analytics (**GA**), Google Tag Manager (**GTM**), and Google Search Console (**GSC**) are utilized to track user interactions, while **New Relic** is employed for application performance management (**APM**).

Customers can create accounts using **social login** or one-time passwords (OTP). The checkout process is smooth and allows for partial payments through the **Tabby** and **Tamara** payment gateways.

Our website optimization efforts have led to a remarkable **60%** increase in traffic and an **80%** boost in sales.

3. Project Name: *Quick Heal (US)*. Role: *Adobe commerce Lead*. Team Size: 8

Quick Heal Technologies is an Indian multinational cybersecurity software company that develops security software for consumers, servers, cloud computing environments, and small to medium-sized enterprises. Its enterprise product offerings are branded under the name Seqrite.

To expand its business in the United States, Quick Heal migrated its website from **Magento Community version 2.3.4 to version 2.3.6**. The website offers virtual and downloadable products for sale. For invoicing, Quick Heal uses **SAP**, while **ZOHO** is utilized for order management. **Stripe** serves as the payment gateway. The website is now live and operating smoothly.

Vrize | Magento Lead Consultant (January 2022 - January 2025)

1. Project Name: *Tropical Smoothie Cafe.* **Role:** *Solution Consultant.* **Team Size:** *5*

Tropical Smoothie Cafe is a restaurant franchise in the **United States**, operating over 1,400 locations nationwide.

This project was built using a **headless architecture**, with **WordPress** serving as the content management system (CMS) and catalog data. The site is hosted on **WPEngine**, while media files are stored on an **Amazon S3 bucket** integrated with WordPress. The frontend design was created using **Next.js (React.js)** and is hosted on **Netlify**.

The website incorporates various tools, such as **Olo** for menu item management and café operating hours, **Yext** for storing and displaying café locations, and **OneTrust** for cookie compliance and handling form submissions. To track and analyze user behavior, we utilized **Google Analytics (GA4)**, **Google Search Console (GSC)**, and **Google Tag Manager (GTM)**. Additionally, the website has been designed to support **deep linking** for mobile apps.

We developed custom plugins for WordPress using hooks to create catalog data and modify the CMS structure. With the aid of custom GTM scripts and other Google tools, we were able to reduce 404 error pages, reorganize the catalog, and optimize page load times. As a result, web traffic increased by **30%**, the average number of web orders rose by **20%**, and the average cost per order grew by **22%**.

2. Project Name: *Lightning labels.* **Role:** *Solution Consultant.* **Team Size:** *7*

I worked on pre-sales, assisting the architect with the migration plan for the website. In this project, we are planning to migrate the existing **Adobe Commerce Cloud** website to **WooCommerce**. The website specializes in offering custom labels and stickers that combine durability with vibrant colors.

3. Project Name: *Souvenirs Marketplace.* **Role:** *Solution Consultant.* **Team Size:** *7*

I assisted the project architect in the pre-sales phase of a project built on **Magento 2.4.5 Community Edition**. The website serves as a multi-vendor marketplace for selling local products in **India**. We implemented customizations on the **Webkul multi-vendor marketplace** to meet specific requirements.

4. Project Name: *Nautical Net.* **Role:** *Solution Consultant.* **Team Size:** 7

Assisted the project architect in pre-sales activities for a **BigCommerce** website. This multi-vendor marketplace enables boat owners in the **US** to book services.

5. Project Name: *For-athletes.* **Role:** *Magento Lead Consultant.* **Team Size:** 23

I developed an **Adobe Commerce website (version 2.4.3)** that specializes in selling fitness equipment and recovery products for athletes in the **United States**. We implemented customizations on the **Ced Multi-Vendor Marketplace** to onboard over **20 brands**, offering more than **2,000 SKUs**. The product types available include simple, configurable, group, and bundle options.

Additionally, we created custom modules, such as the Athlete module, to enable the creation of athlete profiles and gather data on their usage of products and supplements. Currently, there are about **60** athletes associated with this website. We average over **105** orders per day, with an average order value exceeding **\$75**. These transactions span various customer groups, including guests, logged-in users, wholesale customers, and retail shoppers.

Allure Commerce | Magento Developer (December 2020 - January 2022)

1. Project Name: *Bio-Advanced.* **Role:** *Magento Developer.* **Team Size:** 6

This website specializes in selling lawn and garden plants in the **United States**. Initially built on **Magento Community (version 2.1.6)**, it featured simple, configurable, bundled, and grouped products. The CMS pages were created, stored, and displayed using **WordPress**. We successfully migrated the website to **Adobe Commerce Cloud (version 2.4.1)** and customized the Mageplaza blog extension to transfer the WordPress CMS data to the new site.

For improved product search functionality, we implemented Amasty Elastic Search along with layered navigation, allowing users to search for products, blogs, articles, and categories efficiently. Additionally, we integrated **Salesforce** for order management.

Custom modules were developed to add articles to category pages, manage the quantity of virtual products, and synchronize product reviews and ratings from **Bazaarvoice**.

As a result of these enhancements, we reduced page load time by **30%**, increased user engagement by **60%**, and ultimately boosted sales by **34%**.

2. Project Name: *Nahanco.* **Role:** *Magento Developer.* **Team Size:** 5

This website specializes in selling hangers in the United States. Initially, it was built on the **Magento Community platform (version 2.2)** and featured simple,

configurable, and bundled products. There were over **1,000 SKUs**, along with more than **300,000 orders** and **20,000 customers** in the system. We successfully migrated the site to **Adobe Commerce Cloud (version 2.4.1)**.

To manage tax calculations, we utilized the **Avatax** system. I resolved a bug in the Avatax module to streamline business operations. We also employed **TaxJar** to analyze user behavior on the website. Using the insights gained, we developed custom modules that dynamically added products to the cross-sell section based on user behavior and created a "**Buy Now**" feature for instant purchases.

Additionally, we designed coupons tailored to specific customer segments. As a result of these improvements, we achieved a **20%** reduction in page load time, increased user engagement by **40%**, and doubled our sales with a **100%** increase. Furthermore, we implemented a custom order data tracker module that exports order data in CSV format via cron to a third-party system.

3. Project Name: *Maria Tash*. **Role:** *Magento Developer*. **Team Size:** *5*

This website sells jewelry in the **United States** and was developed using **Adobe Commerce Cloud (version 2.4.0)**. I have created a custom module that adds banners on the product listing page, positioning them between the products. Additionally, this module allows for filtering products based on category, attributes, and post length, and it also preselects the relevant products.

Codilar | Magento Developer (January 2018 - November 2020)

1. Project Name: *PMJ*. **Role:** *Magento Developer*. **Team Size:** *8*

This website sells jewelry in **India** and was built on **Magento Community version 2.2.6**. I played a key role in developing this site, creating custom modules to calculate product prices based on various attributes and custom table data. Additionally, I implemented a shipping price estimator and an estimated delivery feature for products based on PIN codes. The site also includes a gender-based newsletter subscription, an appointment module for booking appointments with the store, and integration with **Rapnet** to retrieve diamond details.

2. Project Name: *PMJ Internal Website*. **Role:** *Magento Lead Developer*. **Team Size:** *5*

This website features products available to customers in-store, accessed by sales representatives located in **India**, the **Middle East**, and the **US**. It was developed using **Magento Community version 2.3.1**. I created a custom module that facilitates the import of products with unique attributes and multiple rows of data for a single product, even if it lacks an SKU. Additionally, this module allows for the creation and assignment of categories during the product import process, as well as the calculation of product prices based on the custom attributes and data.

3. Project Name: *Allbackyardfun*. **Role:** *Magento Lead Developer*. **Team Size:** 5

This website sells furniture products in the U.S. It was originally built on **Magento Community (version 1.9.3)** and featured over **4,000 SKUs**, including simple products with custom options and configurable products. The site managed more than **150000 orders** and **35000 customers** and included different customer groups, such as logged-in users, wholesale buyers, retail customers, and a custom trade group. We successfully migrated the site to **Adobe Commerce Cloud (version 2.3.3)**.

I developed custom modules to fetch **Instagram** posts via API. Under the supervision of admin users, these posts are displayed on the website. Additionally, there is a module that allows customers to request changes to their associated customer groups from admin users.

As a result of these improvements, we achieved a **20%** reduction in page load time, a **30%** increase in user engagement, and a **12%** boost in sales.

Alshaya India (March 2020 - October 2020)

I worked as an outsourced resource for Alshaya in India, providing production support for nine brands, including Mothercare, H&M, Boots, Pottery Barn Kids, Victoria's Secret, Foot Locker, Pottery Barn, Bath & Body Works, and Muji. Additionally, I offered development support for American Eagle and West Elm. Each brand operates multiple websites and sells various products in the **Middle East**.

Education

Bachelor of Engineering in Computer Science

BNM Institute of Technology, 2018

Awards and recognition

- **Vrize:** [Flagbearer](#)
- **AllureCommerce:** [Certificate of achievement](#)
- **PimCore:** [Appreciation](#)

Technical Skills

- **Programming Languages:** PHP, SQL, JavaScript, jQuery, JSON
- **Frameworks and Technologies:** Magento 2, Adobe Commerce, BigCommerce, WooCommerce, WordPress, MVC, MVVM, Olo, Yest, and ButterCMS
- **Search:** MySQL search, Elasticsearch, Open search, Algolia search, Live search

- **Project Management Tool:** JIRA, Orange, Trello, Zoho
- **GUI:** HTML, XML, CSS
- **Database:** MySQL
- **Server:** Amazon Web Services (AWS), Adobe Commerce Cloud, Netlify
- **Version Control:** GitHub, BitBucket, GitLab
- **Other Tools:** FileZilla, Postman, NewRelic, Fastly, Seqrite

Responsibilities:

- **Strategic Leadership:** Gather and analyze client requirements to convert business objectives into actionable development strategies.
- **Collaborative Design:** Work closely with UI/UX design teams to ensure alignment between functional requirements and innovative design principles.
- **Project Management:** Estimate project scopes, timelines, and resource needs, providing clients with clarity and actionable roadmaps.
- **Client Communication:** Maintain transparent communication regarding progress, deliverables, and timelines, utilizing detailed System Requirement Specifications (SRS).
- **Team Leadership:** Head cross-functional teams to ensure project milestones are met within budget and on schedule.
- **Technical Expertise:** Develop highly customized e-commerce websites on different frameworks.
- **Quality Assurance:** Uphold rigorous quality control standards to meet or exceed project benchmarks.
- **Troubleshooting:** Resolve integration issues, implement feature enhancements, and apply crucial security patches.
- **DevOps Collaboration:** Partner with DevOps Engineers to manage deployment environments and deliver high-quality solutions.
- **Goal Setting:** Establish clear performance objectives and KPIs for team accountability.
- **Mentorship:** Foster a culture of recognition and professional development by training newcomers and upskilling team members in Magento 2 / Adobe Commerce.
